New York, January 31, 1919.
Dear Mr. Cole,
I again wish to re-
iterate my thanks to you for the let-
ter of Edwin Stanton regarding the
manufacture of mortar carriages dur-
ing the Civil War, which is really
most interesting, and which I expect
we have framed and placed with other
memento in my collection in the hall
of the place at Ringwood Manor, which
I trust I may have the pleasure of
showing you some day when the weather
gets more seasonable.
February 2nd, 1917.
Mr. Erskine Hewitt,
40 Church Street, New York City.
Dear Erskine:
I enclose herewith proxies for
The annual meeting of the Ringwood
the annual meeting of the Hewitt Co.
which I have signed as Trustee of the Sarah A. Hewitt
Trust.
I also enclose proxies for
The annual meeting of the Hidvale Steel
the annual meeting of the New York &
the annual meeting of the Hewitt Co.,
the annual meeting of the Ringwood Co. and
the annual meeting of the Lehigh & Oxford
ing Co.
All of which are duly signed.
Very truly yours,
E S RITCHIE & SONS

Patent Magneto Electric Machine.
FOR NERVOUS DISEASES.
This machine is strongly recommended by the medical Profession, as a curative agent for Tic-Doloreux, Neuralgia, Chronic Rheumatism and Gout, Paralytic Affections, Liver Complaint, Indigestion, Hæmorrhoids, Nervous Debility, St. Vitus's Dance, Hysteria, Epileptic Fits, and Hypochondria.
DIRECTIONS.—Connect two metallic cords or wires with the sockets in the ends of the box, and apply the handles connected with the other ends of the metallic cords or wires to any part of the person through which it is desirable to pass the current of electricity. Then turn the crank, regulating the strength of the current by the speed, and by the knob at the end of the box, it being desirable to increase the strength only to that degree most agreeable to the patient. It is less unpleasant to the patient if wet sponges are placed in the ends of the handles and these applied to the skin, as they prevent the prickling sensation. The sponges should never be put into the box while wet, as they rust the machinery.
In applying it for Tic Douloureux, the operator takes hold of the wet sponge over the back part while the patient holds the wet sponge over the forehead, and in applying it to the face, place one of the handles in the wet sponge in the mouth, and apply it to any other part of the person. The bearings and springs must be oiled occasionally. Warranted to work well if properly used.

Life of Nikola Tesla

First Full Biography Of Electrical Genius

Reviewed by
Joachim Joesten

PRODIGAL GENIUS: THE LIFE OF NIKOLA TESLA. By John J. O'Neill. Ives Washburn. 322 pp. $3.75.

IF FAME can be measured by the linage accorded each great name in the standard reference books, the Yugoslav-American inventor Nikola Tesla undoubtedly has not yet come into his own. In both of the principal encyclopedias of the English-speaking world he trails his competitors in electrotechnical glory. The "Britannica" gives Tesla only 20 lines as compared with 108 for Guglielmo Marconi and 56 for Thomas A. Edison; in the "Americana" he rates 51 lines against 94 for Marconi and 180 for Edison.

In the eyes of John J. O'Neill, science editor of the New York *Herald Tribune* and a 1937 Pulitzer Prize winner, this is a flagrant injustice which he has set out to correct in his "Prodigal Genius," the first full-length biography of Nikola Tesla. He does so with all the skill of an expert, the verve of an able and entertaining writer, and the complete devotion of an admiring disciple, to whom the master once said, "You understand me better than any man alive."

The net result is as unstinting a eulogy as has ever come across my desk. O'Neill has no doubt whatsoever that the object of his veneration was the greatest genius ever to tread this earth.

This is not to say that O'Neill does not make a perfectly plausible case for his hero-worship. By any standard Tesla was a genius, a mental giant, and an electrical magician whose wizardry will stand unmatched for a long time to come. Whether he really deserves full credit for all the spectacular discoveries and achievements which his biographer attributes to

diwork in an electrical repair shop. Four years later, the penniless immigrant owned a million dollars, which George Westinghouse paid out to him for a bunch of his inventions. For the next 15 years he lived in clover, producing ever new wonders and entertaining freely. New York society lionized him but he neither married nor did he pay any attention to his female admirers. Sex was banned from the life of this fantastic explorer. In the '20s his fame declined and he was all but forgotten. He died on Jan. 8, 1943, penniless as he had arrived at these shores and alone as he had always been amid grandeur and glory.

NIKOLA TESLA

NIKOLA TESLA, INVENTOR, DIES AT AGE OF 85

Gained Fame in Field of Electricity.

New York, Jan. 7 (AP).—Nikola Tesla, 85, an electrical inventor, died tonight in his suite at the Hotel New Yorker.

Members of the hotel staff reported that Tesla had been in failing health for two years. He was found dead in bed. With emphatic ideas on personal health as well as electrical engineering, Tesla was a vegetarian, and had his meals especially prepared for him.

The son of a Greek clergyman and a Serbian mother who was the daughter of an inventor, Tesla was born
